GETTING STARTED

Quick start guide

THIS DOCUMENT IS FOR:

Invicti Enterprise On-Demand, Invicti Enterprise On-Premises

Feedback

This quick start guide aims to get you oriented with Invicti Enterprise. For this scenario, you will scan one of the test websites of Invicti. Scanning a test website can give you an idea about the capabilities of Invicti Enterprise.

Here are some of the things you will learn how to:

- [Add a target website to your Invicti Enterprise account](#)
- [Customize scan settings for your website](#)
- [Review scan results](#)
- [Integrate Invicti Enterprise with an issue tracking system](#)
- [Create a scan report](#)

Prerequisites for the Invicti Enterprise On-Premises

This guide is applicable to the Invicti Enterprise On-Demand edition.

This guide is also applicable to the On-Premises edition only if you install a [scanner agent](#) and an [authentication verifier agent](#) and [configure your email settings](#). These are required to scan your web application, verify any login forms, and receive any report following any scans.

Step 1: Adding a target website

Before scanning, you have to add a website to your Invicti Enterprise account. To do this, from the main menu, select **Websites** > **New Website**. Then, you can enter the necessary information, such as name, URL, and technical contact, and select **Save**. For further information, see [Adding a Website in Invicti Enterprise](#).

New Website

Name (required)

URL (required)

Description

222

Website Groups

☒ Select All ☐ Select None ☒ Inverse Selection

Filter Website Groups

Website Groups

☒ Default

Technical Contact (required) ?

Website Tags

☒ VulnWeb ☒ Php x

Enter up to 20 tags.

Agent Mode ?

☒ Cloud ☐ Internal

By clicking the **Save** button you are agreeing to the Invicti Enterprise [Terms of Service](#).

Feedback

For the Agent Mode, you can select the Cloud when the website is not in your internal network and is accessible publicly from the internet. If you want to scan a website in your internal network, you can select the Internal mode and [install an agent](#). Using the On-Premises edition? See [Installing the Invicti Enterprise Agent](#).

Step 2: Launching a scan

Now that you've added your website for the security scanning, you can go ahead and launch a scan. To do this, from the main menu, select **Scans > New Scan**. Invicti lets you start scanning with the default settings.

Using default settings

It provides many default configurations including Default Scan Policy with built-in Security Checks, Report Policy, Maximum Scan Duration, Scan Scope, Heuristic URL Rewrite Mode, and Notifications. This makes it easy to get started quickly. To understand the scan settings in-depth, see [Creating a New Scan](#).

New Scan

Target URL (required)

Options

Scan Settings

- General**
- Scope
- Additional Websites
- Links/API Definitions
- URL Rewrite
- Pre-Request Script
- Scan Time Window
- Notifications
- PCI Scan
- Shark (IAST and SCA)

Authentication

- Form
- Basic, NTLM/Kerberos
- Header
- Client Certificate
- OAuth2

Scan Policy
Default Security Checks (Built-in)

Report Policy
Default Report Policy (Built-in)

Custom Cookies

Enter any required cookies in the format **cookieName=value**
The value must be URL encoded. Use semicolons (;) to separate multiple cookies.

Crawling

- ☒ Find & Follow New Links
- ☒ Enable Crawl & Attack at the Same Time

Maximum Scan Duration
48 hours

0 hour 30 hours 60 hours 90 hours 120 hours

Feedback

You may wish to go ahead with the default settings. After selecting the target website, you need to select **Launch**. Right after, Invicti will begin scanning the website.

Scan Summary

Status	 473/2175 Scanning
Website	  Php Netsparker
Target URL	 http://php.testsparker.com/
Scan Policy 	1
Report Policy 	Default Report Policy
Authentication Profile	(Do not use)
Scan Scope	Entered Path and Below
Initiated	03/09/2022 08:24 AM

You can monitor the progress in real-time. Also, Invicti will start reporting vulnerabilities as soon as it identifies them.

Using customized settings

What if you need to configure the scan settings and authentication? You may have a website that requires fine-tuning the scan settings. To meet such needs, Invicti has extensive customization options suitable for your website. The following scenario will showcase some of these extensive customization options.

- For this scenario, you need to enter authentication information so that Invicti can crawl and attack password-protected web pages. To do so, select **Form > Form Authentication**. As the PHP test website has a straightforward login page, it is easy to configure.

☒ Form Authentication 

Login Form URL (required) 

☐ Override Target URL With Authenticated Page 

☒ Detect Bearer Authorization Token 

Personas

Active	Username (required)	Password	OTP
<input checked="" type="radio"/>	<input type="text" value="admin"/>	<input type="password" value="*****"/>	... 

- Once you enter the login credentials, select **Verify Login & Logout** to make sure that Invicti can crawl and attack these web pages. If your own website has a different configuration for authentication, see [Overview of Authentication](#).
- Next, you may wish to configure the Scan Scope. It lets you define what part of the website can be scanned. You can instruct Invicti Enterprise to scan only the entered URL. That means only the supplied URL and the parameters on its page will be scanned.
- Further, you can exclude a certain part of the website from the security scanning. You can do this thanks to the regular expression (RegEx). If you wish, you can also exclude the authentication web pages from the scan. When you select the Exclude Authentication Pages checkbox, Invicti will exclude authentication-related web pages – such as login and logout – from the scan scope to prevent logging out during the scan. For further information, see [Scan Scope](#).

Feedback

Scope ?

Entered Path and Below Only Entered URL Whole Domain

Only the supplied URL and the parameters on its page will be scanned. For example, if you enter **http://example.com/test.asp**, the scanner will only scan URLs that **start with http://example.com/test.asp** and will **not** scan the following URLs:

- http://example.com/email/
- http://example.com/email.asp

[More Information](#)

☒ Do not differentiate HTTP and HTTPS protocols

Exclude URLs with RegEx (required) ?

gtm\.

WebResource\.

ScriptResource\.

New RegEx Pattern

Regex Pattern Settings ☐ Include ☒ Exclude

☒ Exclude Authentication Pages ?

Disallowed HTTP Methods ?

Excluded Usage Trackers

New Excluded Usage Tracker

Feedback

- Now, you may wish to configure the scan time window. As the PHP test website is in the production environment and is accessible to visitors, you may not want to cause any disruptions. So, you can instruct Invicti to perform scanning within non-business hours. For further information, see [Scanning Production Environments](#).
- In addition to these customizations, you may add [links](#) to have a head start in scanning and configure [notifications](#). To understand each setting and how to configure it, see [Invicti Enterprise Scan Options Fields](#).

Remember that scan duration may vary depending on the size of the web application

and the variety of security checks enabled in the Scan Policy you've selected.

Step 3: Reviewing scan results

When Invicti completes the security scanning, it notifies you with an email. In this scenario, the scanner warns you that the PHP test website is very insecure and requires immediate attention.

invicti

Your new scan report is ready

Hello Tuncay Kayaoglu,

The scan of ASPNET (<http://aspnet.testsparker.com/>) has finished!

 Your website is **very insecure!** Fix it now.

8 issues with critical severity were identified during the scan.
19 issues have been addressed or don't require any actions.

[View the Report](#)

Feedback

- Now, select **View the Report Online** to see the scan summary. This page lists vulnerabilities grouped by severity levels. For further information, you can review the [technical report](#) to see whether the vulnerability identified by Invicti is **confirmed**. Once you understand this vulnerability is confirmed, you can start working on the issue.

Parameter Name	id
Parameter Type	GET
Attack Pattern	test + ((SELECT 1 FROM (SELECT SLEEP(25))A))/*XOR(((SELECT 1 FROM (SELECT SLEEP(25))A)))OR' "XOR(((SELECT 1 FROM (SELECT SLEEP(25))A)))OR"*/ /* 80391442-a663-4e2f-a765-ec90b9a20593 */
Retestable	✓

Feedback

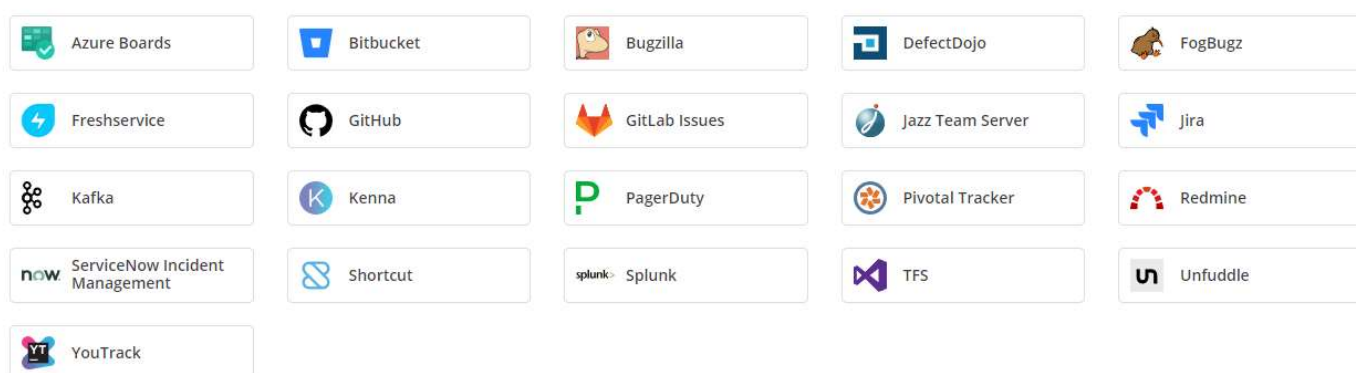

- You may wish to select **Update** to assign this vulnerability to developers. Invicti notifies them so that they can start working on this vulnerability. Or, you can select the **Accepted Risk** button and prefer not to work on it.
- When you want to review the progress, you can select **Issues > All Issues**. This page provides you a quick overview of vulnerabilities. For example, Invicti shows that the Blind SQL Injection is **Fixed (Unconfirmed)**.
- This means remediation action has been taken on this issue, and the issue is updated as **Fixed**. Now, select **Issues > Waiting for Retest**. Invicti notifies you that it is about to scan to confirm the remediation, and when the scan is completed, you'll be notified.
- If the issue is fixed, the issue's state will be automatically changed to **Fixed (Confirmed)**; otherwise, Invicti will change its status back to **Present** again and will assign it to the user who marked the issue previously as **Fixed**.

Want to create a team in Invicti Enterprise? See [Managing Team Members in Invicti Enterprise](#).

Step 4: Integrating with issue tracking tool

To handle issues easily, you may wish to integrate Invicti Enterprise with an issue tracking system. Invicti integrates with a wide range of software and tools that you can integrate into your existing SDLC processes, including vulnerability management systems, issue tracking systems, continuous integration systems, and web application firewalls. These tools help you to streamline the bug-fixing processes.

Issue Tracking Systems

For further information about integrations, you can see [Integrations](#).

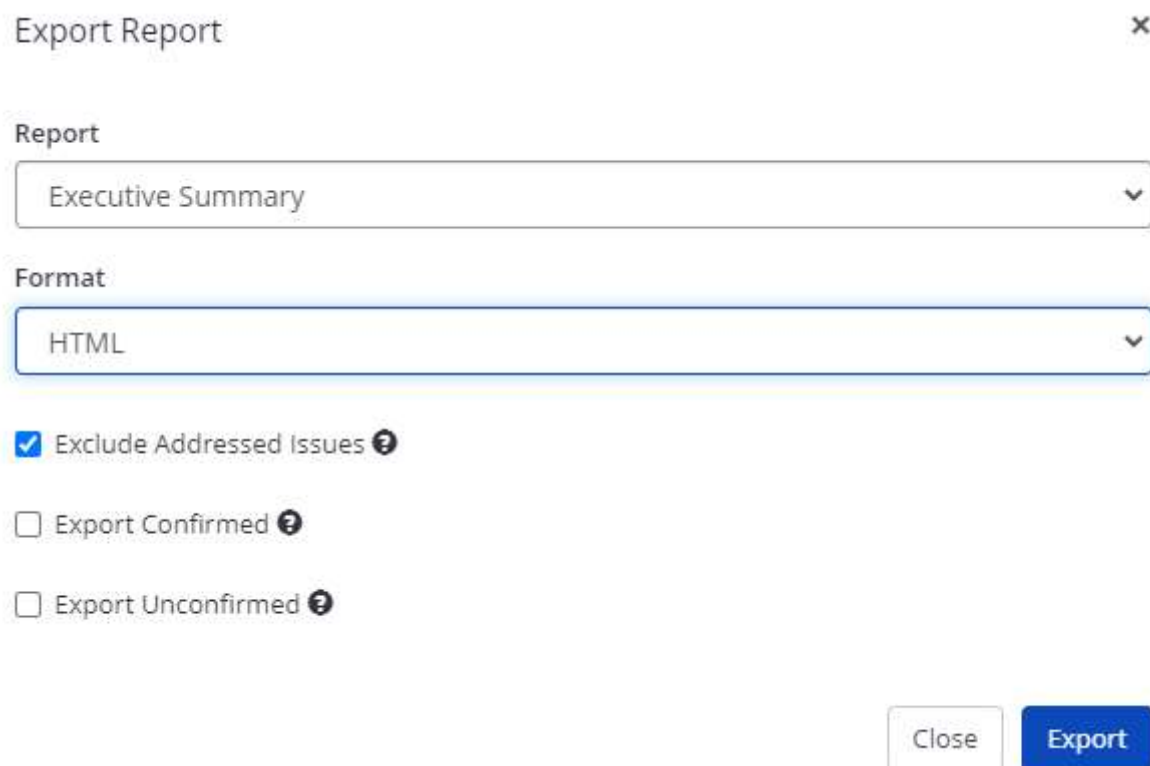

- Let's say you set up an integration with Jira. So, you want Invicti to report critical issues to Jira once the scan is completed. Then, you can assign issue(s) to developers directly from Jira. To do so, you can select **Notifications > New Notification**.
- Then, you can configure bi-directional integration with Jira, so, when a developer fixes an issue and sends a merge request, Invicti tests the fix to make sure that the issue is really fixed or not. If Invicti still identifies an issue, it re-assigns the issue to the same developer. To configure this, you can select **Integrations > New User Mapping**. Then, select the Jira tab and complete the integration.

You can view this [infographic](#) to see how Invicti works and which tools it integrates with.

Step 5: Creating a scan report

Suppose you've scanned php.testsparker.com and assigned the issues to developers. While they have been working on these issues, your managers may want to view the progress. So, you need to submit a report to them so that they can glance through the report and understand your progress.

To generate an executive summary, from the **Recent Scans** window, you can select **Report** from the relevant scan. Then, select **Export**.

Export Report

Report

Total Requests: 22,615

Average Speed: 14.1 r/s

Risk Level:

CRITICAL

Your website is very insecure!

Critical vulnerabilities were identified on your website. You need to act now to address these problems otherwise your application will likely get hacked and possibly attackers will be able to steal data. These issues need to be addressed urgently.

What's the Worst that could Happen?

An attacker could access and control logged in user or admin accounts if attack succeeds

An attacker can abuse a vulnerability on the website to attack individual users of the website. If this attack succeeds, the attacker can hijack their session. This would enable them to take any action that those users can take and to steal their information. For example, an admin might have complete access to the database and the ability to change the website.

What if developers want to view the progress on the website? Then, you can select the **Detailed Scan Report** from the Report drop-down and **Export**. For more information about different types of reports, see [Reports](#).

This quick start guide aims to get you oriented with Invicti Enterprise. Need more information about how to use Invicti Enterprise? Visit <https://www.invicti.com/support>. Still have questions? Contact support@invicti.com.
